

NOTE : FIRST YOU HAVE TO RUN BACKEND SERVER THEN FROND-END

FOR FRONT-END SIDE :

- We have two folders... beast-life-user for **user** side and beast-life-frontend for **admin** side
- Unzip them.

TO RUN FRONTEND : (for each folder)

Extract the ZIP file.

Open a terminal in the project folder.

npm install

npm start

BACKEND SIDE –

- Check **application properties** before running the programming... configure database connection neatly ..put your name & password for DB connection also put valid database name that you have to create already in properties.
